Vitria Technology, Inc., a leading provider of BPM solutions, has been awarded the 2008 SOAward for Best Integration Tool of the year in Spain for its new M₃O BPM suite.

In addition, STA Andorra won the award for "Best SOA Project". Servei de Telecomunicacions d'Andorra (STA), the Andorran government's public telecommunications company, won for their project which was undertaken using the Vitria M₃O platform; a relationship that began in 2006 with the Andorran company's entrusting Vitria with managing all of its SOA architecture projects.

The awards were announced during *iiR España's 2008 SOA congress*, the key Spanish event for the SOA and integration technology sector. The event was held April 22&23, 2008 at the Husa Princesa Hotel in Madrid included all the leading vendors and clients in the system architecture sector.

Sector professionals awarded Vitria's M₃O for its innovation with the committee citing M₃O's ease of use, convenience and flexibility for the client. M₃O, the next generation BPM suite, represents the convergence of Web 2.0, BPM and Event Processing, delivering a truly rich user experience, true collaboration between Business and IT, a unified modelling environment, the next generation BAM and Business Event Management. M₃O enables companies to directly model, manage, supervise and optimise their business processes.

Part of the M₃O is the Exception Manager product which utilizes all of M₃O's capabilities, automatically resolving process exceptions across the enterprise. Exception Manager is built on three generations of product knowledge in exception management and leverages the benefits of business-level modeling, policy-driven automated resolution, and standards-based technologies in a high performance, enterprise-class solution.

Thanks to this suite, both business and IT departments have more agility and capacity to respond to changes, and can reduce implementation times for strategic processes. With M₃O, business analysts can count on the necessary means to lead the design and management of their own process models, without having to wait days or weeks for the IT department to completely develop and finalise a process.

Guy Bouchon, Managing Director, Vitria Spain, said, "We are very proud of the awards that Vitria company and one of our clients have won during SOA 2008, the main industry event in our country. They are two awards that are particularly relevant to us, given that it is the professionals in the sector who have recognised our efforts to deliver a truly innovative product suite which really establishes a new standard in the SOA/BPM market".
